EDUCATION

Bachelor in Computer Science — Nile University, Egypt — *Sep 2021 – Sep 2025*
Full-Stack Development Curriculum — The Odin Project — *Jul 2025 – Mar 2026*

EXPERIENCE

Founder & Software Engineer | Jobanji — *Feb 2026 – Present — TypeScript, Hono, Temporal, PostgreSQL, Next.js*

- Building an AI job-search service for people looking for work in the UAE and Egypt: it finds matching roles, tailors each customer's CV and cover letter, and applies for them.
- Crawls 1,000+ company careers sites and ATS boards, tracking 65,000+ open jobs, and goes beyond them: it contacts companies before roles are posted, reaches hiring managers directly and follows up on a schedule.
- Matching narrows each day's jobs with SQL filters, pgvector search and model scoring; Temporal runs it and the weeks-long follow-ups, so work survives restarts and no email is sent twice.
- Each customer's data is isolated with Postgres row-level security and encrypted under their own key, so deleting an account means destroying one key; 190 test files run against real Postgres.
- Security-reviewed against the OWASP Top 10, API Top 10 and LLM Top 10, then hardened outbound requests against SSRF, file uploads and the dependency supply chain.

Software Engineer | Sync NGO — *Jun 2026 – Present*

- Delivered an AI recruitment platform in production for enterprise clients, owning features across three React portals, a Python API and a background worker.
- Built the portals on a shared design system and a generated API client (TanStack Router and Query, react-hook-form, Zod).
- Built RAG candidate search (CV chunking, embeddings, pgvector ranking and reranking) and LLM pipelines that turn CVs into typed schemas and score candidates with evidence.
- Shipped through GitHub Actions CI/CD with staging and production deploys, CodeQL and 117 automated tests.

Shopify Web Developer | Freelance — *Mar 2026 – Jun 2026*

- Shipped 3 Shopify storefronts for international clients using Liquid, Vanilla JavaScript, and reusable Web Components.
- Built a webhook-driven restock notification service for real-time inventory alerts.
- Improved SEO and performance with structured data and responsive media, to WCAG AA and Core Web Vitals.

PROJECTS

Last-Mile Delivery Platform — *TypeScript, NestJS, Kafka, PostgreSQL/PostGIS, Redis, OpenTelemetry (in progress)*

- Building a merchant platform with a public API and an SDK: idempotent shipment creation keyed in Redis, so a retried request replays its response instead of creating a duplicate.
- Merchant dashboard, public tracking site and event-driven services on Kafka, with distributed tracing through OpenTelemetry and an explicit shipment state machine.

MovieClub (movie-club.net) — *TypeScript, React, TanStack Query, Express, Prisma, PostgreSQL*

- Live full-stack platform aggregating cinema showtimes from 50+ local cinemas with an automated daily sync, plus social features for rating and discussing movies.
- npm-workspaces monorepo with a shared types package and Zod validation across the API boundary; JWT auth, rate limiting, Vitest tests, and CI with CodeQL and dependency review.

WhatsApp Application — *React, TanStack Query, Zustand, Socket.IO, Express, Prisma, PostgreSQL*

- Full-stack real-time chat with friend requests, live online status, read receipts and paginated message history; shared Zod schemas between client and server, Vitest tests, and CI with CodeQL.

ACHIEVEMENTS

- Nile University Competitive programming Arena (NUCPA 2025) — NU 1st Place
- ECPC 2025 Finalist — 129th / 1,734 and 4th among 80+ university teams
- Codeforces Specialist — 50+ contests
- Official ICPC Coach — 6 teams preparing for ICPC 2026

CERTIFICATIONS

- MongoDB Associate Developer — MongoDB (Apr 2026)
- DevOps with Docker — University of Helsinki (Jun 2026)
- Machine Learning Specialization — DeepLearning.AI (Jun 2025)
- TypeScript — Frontend Masters (Feb 2026)

SKILLS

Languages: TypeScript, Python, JavaScript, C++, C#, SQL
Frontend: React, Next.js, TanStack Query/Router, Zustand, HTML5, CSS3, Tailwind
Backend & Data: NestJS, Hono, Node.js, Express, FastAPI, .NET, REST APIs, Temporal, Prisma, Drizzle, PostgreSQL/PostGIS, Redis, Kafka, MongoDB, pgvector, WebSockets
AI & ML: LLM pipelines, RAG, OpenAI API, LangGraph, PyTorch, TensorFlow, Pandas, NumPy, XGBoost
Testing & DevOps: pytest, Vitest, Playwright, React Testing Library, Docker, Fly.io, GitHub Actions CI/CD, CodeQL, OpenTelemetry, pnpm/Turborepo, Git
Spoken: Arabic (Native) • English (IELTS Band 7)

OPEN-SOURCE CONTRIBUTIONS

nodejs/node #62302 • langchain-ai/docs #4731 • mdn/content #42982 • tj/commander.js #2641
