EDUCATION

Bachelor in Computer Science — Nile University, Egypt *Sep 2021 – Sep 2025*
Full-Stack Development Curriculum — The Odin Project *Jul 2025 – Mar 2026*

EXPERIENCE

Software Engineer | Sync NGO *Jun 2026 – Present*

- Delivered an AI recruitment platform in production, adopted by enterprise clients, owning features end to end across three React portals, a Python API and a background worker.
- Built three React SPAs on a shared internal design system and a generated API client, so every portal consumes the same typed contract; TanStack Router and Query, react-hook-form with Zod.
- Built LLM pipelines that turn unstructured CVs into typed schemas and score candidates with evidence, so I know what production-grade AI output takes beyond a demo.
- Shipped through GitHub Actions CI/CD with separate staging and production deploys, CodeQL scanning and 117 automated tests.

Shopify Web Developer | Freelance *Mar 2026 – Jun 2026*

- Shipped 3 Shopify storefronts for international clients using Liquid, Vanilla JavaScript, and reusable Web Components.
- Built a webhook-driven restock notification service to automate real-time inventory alerts to subscribed store customers.
- Boosted SEO and performance using structured data and responsive media, with adherence to WCAG AA and Core Web Vitals.

PROJECTS

Cinema Discovery & Social Platform Website

- Built a full-stack platform aggregating real-time showtimes from 50+ local cinemas with automated daily synchronization and social features for rating and discussing movies.

Real-Time Chat Application Website

- Built a real-time WebSocket messaging app with live presence, read receipts, group chats, paginated history, and virtualized message lists.

Last-Mile Delivery Platform — TypeScript, NestJS, Kafka, PostgreSQL/PostGIS

- Building a merchant platform with a public API and an SDK: idempotent shipment creation keyed in Redis, so a retried request replays its response instead of creating a duplicate.
- Merchant dashboard, public tracking site and event-driven services on Kafka, with an explicit shipment state machine.

Quantum Malware Detection

- Benchmarked classical and quantum ML pipelines for malware classification, comparing SVM, Random Forest, XGBoost, QSVM, and Variational Quantum Classifiers with PCA using Qiskit and PennyLane.

ACHIEVEMENTS

- Nile University Competitive programming Arena (NUCPA 2025) — NU 1st Place
- ECPC 2025 Finalist — 129th / 1,734 and 4th among 80+ university teams
- Codeforces Specialist — 50+ contests
- Official ICPC Coach — 6 teams preparing for ICPC 2026

CERTIFICATIONS

- MongoDB Associate Developer — MongoDB (Apr 2026)
- DevOps with Docker — University of Helsinki (Jun 2026)
- Machine Learning Specialization — DeepLearning.AI (Jun 2025)
- TypeScript — Frontend Masters (Feb 2026)

SKILLS

Languages: C++, Python, TypeScript, JavaScript, C#
Frontend: React, Next.js, HTML5, CSS3, Tailwind
Backend & Data: FastAPI, Node.js, .NET, REST APIs, OpenAPI, PostgreSQL, MongoDB, pgvector, WebSockets, GraphQL
AI & ML: LangGraph, RAG, PyTorch, TensorFlow, Pandas, NumPy, SciPy, XGBoost
Testing & DevOps: pytest, Vitest/Jest, React Testing Library, Playwright, MSW, Docker, CI/CD, Git
Concepts: Problem Solving, Design Patterns, W3C Web Standards, HTTP, IETF Standards

LANGUAGES

Arabic (Native) • **English** (IELTS Band 7)
